

MSS®-Pack Alkali PC

Alkaline Based Bottle Washing Agent (Liquid)

Features

Pack Alkali PC is very effective in removing labels from bottles thanks to its high alkalinity. It prevents residue in bottles and calcification in the machine thanks to the phosphonate compounds, surface active agents and defoamers it contains. It is an alkaline liquid bottle washing agent that can be used in the milk and beverage industry with manual or automatic dosage units in bottle washing machines.

Free Alkalinity: 15±2.5ml

Physical Properties: It is in brown liquid form.

Usage Method and Amount

The usage concentration of Pack Alkali PC can vary between 0.5-2.0% depending on the sector (milk, beverage and soda) and operating conditions (system movement, type of machine, spray pressure and speed). The usage temperature is 60-80 °C. When Pack Alkali PC is first used, it is checked whether there is any calcification in the machine. If there is, it should be cleaned with KREON Lime. Pack Alkali PC may cause problems in the machine and in washed bottles due to its stone removal feature

Concentration Determination: 10 ml of bath solution is taken into a conical flask and titrated from red to colorless with 0.1 N HCl as phenolphthalein indicator. When the consumption read is multiplied by the factor, the %Concentration of Pack Alkali PC in the bath is found.

Pack Alkali PC %Concentration = Reading consumption (ml) x Factor

Factor (by weight) = 0.09

Free and Total Alkalinity Determination: 10 ml of Pack Alkali PC solution prepared as 10 mlNt is taken into a conical flask and pure water is added. It is titrated from red to colorless with 0.1 N HCl as phenolphthalein indicator. The consumption read gives the free alkalinity directly.

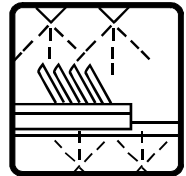

Storage

Store in a cool and dry environment. Do not stack more than three canisters on top of each other. Shelf life is three years from the Production Date. Protect from freezing.

Security Symbol
