

# MSS® -MOBİDİK CL-Tab

## Stabilized Active Chlorine Tablets for Pools

### Features

If the amount of active chlorine in the water is insufficient, the resulting organic substances cause strong odors and threaten human health. Mobidik - Chlorine Tablet with 90% active chlorine burns and destroys the unfilterable dirt that pool users add to the water, which creates an ideal feeding environment for bacteria and fungi; it inactivates viruses. Since it dissolves slowly, the active chlorine in it penetrates the pool water for a long time and allows continuous chlorination.

**Composition:** Contains sodium trichloroisocyanate.

### Usage and Amount

The pH value should be brought between 7.2 - 7.6 before the chlorination process. In order to provide optimal disinfection, solid substances in the water should be precipitated and removed. Each tablet is used for 30 m<sup>3</sup> of water. If there is a chlorinator, it is used by placing it inside. It should not be given directly to the pool due to its bleaching effect. The amount of free chlorine in the water should be 0.8 - 2 ppm.

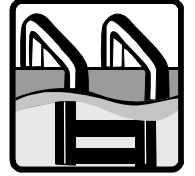

### Storage

Storage should be stored in a cool and dry environment, away from direct sunlight, in its original packaging with its lid tightly closed. It should not be stacked more than two cans on top of each other. Storage life is at least 1 year.

### Security Symbol

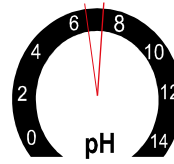

### Havuz Bakımı

ISO 9001 : 2000
