

# MSS®-KREON Graset

## Grease Remover

### Features

Alkaline detergent with corrosion protection, for use in either cold or warm water. Graset is fast-acting and has excellent solubility properties. Graset removes oil and grease deposits of vegetable and animal origin. In cases of solid grease or protein residues, use Graset in the recommended dilution of cold water which will remove proteins without coagulation. Then rinse with hot water to remove any remaining grease. If using a scrubbing machine for floors, use the hot water from the solution tank. The product only contains substances which are authorized for use in food areas. Contains more than 90%-biodegradable surfactants – well within legal requirements.

### Ingredients

Anionic surfactant <5, nonionic surfactant <5, water soluble solvent %5–15, solubilizer, alkali, dye.

### Applications

Alkali and water-resistant floors, walls and work surfaces in food processing establishments and canteens: butcher's, dairies, cheese dairies, baker's shops, fish shops, market stands, hospitals, hotels, etc. Also suitable for foam producing machines. Because of its corrosion protection, it can also be used on anodised aluminium. Not suitable on linoleum or objects painted with acrylic varnish.

### Directions

Before first treatment, always test on an inconspicuous spot to see if the material is alkali-resistant.

Routine cleaning: wet mopping, wet cleaning by machine, surface cleaning: 50 – 200 ml in 8 litres of water.

Stripping: 1 litre in 8 litres of water, scrub by machine or application with foam unit: pure, nozzle 1:5 or 1:10. In case of stubborn soil, use Graset undiluted from the one litre spray bottle.

Work surfaces and kitchen furnishings, which come into direct contact with food, have to be wiped very thoroughly with tap water. Warm water of 60°C accelerates the effectiveness of Graset in case of solid grease soiling. In case of protein soiling always use cold water.

Afterwards, use warm water.
